METALLIC
FINISHES

METALLIC PAINT FINISHES

Our metallic finishes are made using specialist metal powders suspended in various mediums and varnishes, all prepared in our own studio. These are skillfully hand applied over several layers, together with a contrasting coloured highlighter to give added depth.

Finally, all are finished off with the application of antiquing wax, which is designed to remain in the 'low lying' detail to further enhance the appearance. All these stages combine to form a durable finish to our hardwood poles and have become one of our most requested finishes over the years.

There are 6 colours to choose from in this collection:

Distressed Gold, Silver and Bronze

These 3 popular finishes offer a genuine period feel, which is achieved by lightly distressing a highlighted metallic base layer, to reveal a subtle red ground.

Vintage Gold

This finish is not distressed in the normal manner. Alternatively, we utilise specific metal powders together with a tinted wash, giving this finish a rather desirable 'flatter' yet aged appearance, that would sit comfortably in any 'Shabby Chic' scheme.

Silver Gilt

An unusual yet subtle combination of a pale gilt varnish carefully distressed over a red ground. Finally a soft, silver highlight is applied to achieve this rather unique, two tone metallic effect.

Pewter

A surprisingly realistic representation of the metal itself. This finish would make an excellent alternative to our Distressed Silver where a more antiquated and muted tone is required.
